

FILE SYNCHRONISATION MODULE

Synchronise your GeoAnalyser files with other users on your network.

The GeoAnalyser File Synchronisation module has been developed specifically for clients with more than one user of GeoAnalyser who share files.

The module allows each user to ensure they have the latest set of GeoAnalyser files on their PC by checking a central shared location for newer files. The module has been designed as an add-on to the Geoplan GeoAnalyser system.

Key Tasks

- Search the network for more up-to-date GeoAnalyser files.
- Share files with colleagues.
- Create a network back-up of your files in case of PC hardware issues.
- Ensure users have consistent systems, along with the ability to use them off-line.

Key Features

- Improve the experience of sharing files between multiple users.
- Ensure that the user has the latest set of files on their local drive by checking the central shared-server location for newer files.
- Propagate any required changes with ease.

Key Benefits

- Save time distributing changes amongst multiple users.
- Improve operational efficiency by ensuring users have consistent systems.
- Update files quickly with minimal effort or risk of error.
- Very easy to use, no training required.
- Excellent user support as part of your ESP package.

What our clients have said...

“GeoPlan GeoAnalyser removes the guesswork and provides the decision support we need at the click of a button.”
(Molly Maid UK Limited)

“We are very impressed indeed by the flexibility of Geoplan GeoAnalyser, its capacity to map and analyse vast amounts of data, and the development opportunities available.”
(Yum! Restaurants International)
