

Create fitted image files or printed output for all of your sites or territories in a matter of seconds.

The GeoAnalysers Map Output module enables you to produce image files and printed map output of your territories or catchments.

The module has been designed as an add-on to the Geoplan GeoAnalysers system. Output can be created from any GeoAnalysers file that contains boundary information such as territories or catchments.

Key Tasks

- Generate a map for one or all of the boundaries, sites and territories in a document.
- Restrict each map to show a single boundary, site or territory only.
- Generate image files for use in presentations.
- Generate maps directly to a printer.

Key Features

- Batch creation – save time by outputting all boundaries, sites and territories to individual maps in one go.

- Choose to show adjacent territories or define a buffer distance around each site/territory to mask adjacent territories.
- Automatically choose the best orientation for each map.
- Specify the height and width of the map images in pixels.
- Save on printer ink by creating a transparent background.
- Print to different image formats including .bmp, .gif, .jpg and .png.

Key Benefits

- Improve the quality of the map output for use at point of sale, in planning and in the field.
- Save time and money by automating the process of fitting maps to sites or territories, removing the need for laborious manual positioning of the map.
- Preview output before printing to save time and cost.
- Very easy to use, no training required.
- Excellent user support as part of your ESP package.

What our clients have said...

“Geoplan GeoAnalysers removes the guesswork and provides the decision support we need at the click of a button.”
(Molly Maid UK Limited)

“We are very impressed indeed by the flexibility of Geoplan GeoAnalysers, its capacity to map and analyse vast amounts of data, and the development opportunities available.”
(Yum! Restaurants International)
