

Create enhanced, customised and styled reports from GeoAnalyser using maps, data and charts.

Add an extra dimension to your GeoAnalyser outputs to improve the presentation of your analysis and further justify your business case. Use your maps and data together to reinforce your findings, increase the quality of your reports and make your results more compelling.

Accessed from the Extras menu in GeoAnalyser, the Reporting module is available on a **FREE one week trial** with no commitment to buy for existing GeoAnalyser users. Developed as a response to customer feedback, the Reporting module represents a sign of things to come from Geoplan's product development team.

#### Key Tasks

- Prepare styled and **customised outputs** for use in reports and presentations.
- Create reports containing your **choice of maps, data, images and charts**.
- Produce tabular and graphical output in support of your maps.
- Present a summary of the data contained within your GeoAnalyser file.
- Create a suite of reports to compare site or territory performance.

#### Key Features

- Easy to use interface, **no training** required.
- Create a report for any open map you have in GeoAnalyser.
- Retain the style of your reports to reproduce them on a consistent basis.
- **Choose** the **paper size** and **orientation** of the report to suit your requirements.
- **Choose** a pre-defined report **template** or **create your own**.
- **Summarise** the data within your document to **view top-level statistics**.

#### Key Benefits

- Produce professional, styled reports with ease.
- **Save time** by producing high quality output with a few clicks.
- Make your GeoAnalyser outputs more **persuasive** for your key stakeholders.
- Add **extra analysis** to your map output by incorporating statistics and charts.
- Focus on the **business value** of your data in addition to the benefits of creating a map.
- Save time using the batch printing mode.
- No need to move to other software applications to **perform further analysis**.
